Work Experience

.NET Developer

Nov 2021 - Jun 2024

Boeing via Tata Consultancy Services | Remote

- Refactored and Resolved Coverity Findings in .NET: I meticulously addressed and remediated issues identified by Coverity scans within our .NET codebase. By refactoring and resolving these findings, I improved code quality, reduced potential vulnerabilities, and ensured a more robust application.
- Automated CI/CD Pipelines in Azure DevOps: I designed and implemented robust pipelines within Azure DevOps, streamlining the entire software development lifecycle. These pipelines automated code check-ins, vulnerability scans, defect detection, and build storage. As a result, we achieved faster releases, improved code quality, and seamless reuse of builds across projects.
- Resolved Critical Bugs and Technical Debt: I proactively tackled critical bugs and technical debt across the IVT-3DX team's suite of applications, including IVT-Services. By addressing these issues promptly, I ensured smoother functionality, improved code quality, and enhanced user experiences.
- Was chosen as the team lead of 5 .NET developers, driving successful project delivery, optimizing code quality, and achieving business objectives.

Full-stack Developer (.NET/Angular)

Apr 2020 - Oct 2021

Freelance Developer | Remote

- Leveraged Angular Structural Directives: I skillfully utilized Angular's structural directives (such as `ngIf`, `ngFor`, and `ngSwitch`) to dynamically control the visibility and rendering of elements on a web page. By doing so, I improved the user experience by displaying relevant content based on specific conditions.
- Developed Essential API Controllers and Endpoints: Created and implemented API controllers and endpoints required for applications. By designing these interfaces, I facilitated seamless communication between front-end components and back-end services, enabling robust functionality and data exchange.
- Designed and Implemented Angular Routing with Route Guards: I architected a robust Angular routing solution that seamlessly navigates users between different components within our application. Additionally, I incorporated route guards to ensure that unauthorized

users are prevented from accessing sensitive areas. This security measure enhances the overall user experience and protects critical functionality.

- Optimized Data Transfer with DTOs and AutoMapper: I strategically employed Data Transfer Objects (DTOs) and skillfully mapped them to entities using AutoMapper. By doing so, I ensured that only essential data was transmitted between the API and the client. This approach not only improved performance but also enhanced security and minimized unnecessary network traffic.
- Utilized Angular HTTP Client for API Requests: I seamlessly integrated Angular's HTTP client service to fetch data from APIs. By making efficient HTTP requests, I ensured smooth communication between our application and the backend services, resulting in dynamic data retrieval and a responsive user experience.

Software Engineer

Jan 2020 - Mar 2020

Velocitor Solutions | Charlotte, NC

- Added some fields to the Top Violations Side Panel report in the V-Track application using Handlebars.js, JavaScript, and the data received from the stored procedure.
- Investigated and resolved bug on the Vehicle Alerts Page related to alerts not displaying correctly under the Parent Owner category.

Web Developer

Mar 2018 - Jan 2020

Wells Fargo via Collabera | Charlotte, NC

- Enhanced Email Confirmation Process: I implemented a report within the Eastdil Secured Investor application that identifies unsent or blocked email recipients. This report specifically targets contacts listed as "Do Not Solicit" in marketing lists. By providing this information to the working party, we ensured compliance with communication preferences and streamlined the email confirmation workflow.
- Contributed to FIMP UI Redesign: Collaborated on the redesign of the Fixed Income Strategy (FIMP) website for Wells Fargo. Transformed static HTML and CSS into an MVC design pattern application, enhancing user experience and functionality.
- Enhanced Security Logging: Implemented authorization failure logging in the Eastdil Secured Investor application. When incorrect credentials led to warroom access failures, I ensured that relevant information was recorded by adding rows to the tblPPALogging table in the database.
- Enhanced Security: Mitigated security vulnerabilities in our web applications by adding the necessary headers to the web configuration. This proactive measure bolstered protection against potential threats.

Junior Full-stack Developer

Jul 2017 - Dec 2017

Coder Foundry Boot Camp | Kernersville, NC

- Created a personal portfolio and blog website using C#, MVC5 and JavaScript.
- Created a fully functional MVC bug tracker web application, from scratch, implementing enhanced security and file uploading features.

- Created a fully functional financial portal web application using .NET MVC framework. Composed dynamic front-end design using partial views and AJAX.

Systems Analyst

Mar 2017 - Jul 2017

Wells Fargo via Apex Systems | Winston-Salem, NC

- Analyst on the Wholesale Access Remediation Project, which was a deep-dive assessment of high risk, transactional applications used within the Wholesale Identity & Access Management line of business.
- Collaborated with Application Owners and Delegates: Conducted meetings to collect essential information for Wells Fargo Audit Services. Specifically, I focused on the mandated list of applications, ensuring compliance and transparency.
- Data Analysis and Preprocessing: Conducted thorough analysis of application user lists, identifying excess access, toxic combinations, and separation of duties issues. I then meticulously prepared and massaged this data for loading into the database, ensuring accuracy and compliance.

Outside Sales Representative

Jan 2017 - Mar 2017

Sears Home Services | Greensboro, NC

- Conducted Home Presentations for Clients: Met with clients throughout the sales territory, delivering engaging home presentations. These interactions were instrumental in building relationships and driving sales.

Field Engineer II

Oct 2015 - Jan 2017

NSC Global | High Point, NC

- Efficient IT Support and Customer Satisfaction: Successfully performed data migration, re-imaging, and deployment of new corporate computers for new employees and those experiencing significant issues. My commitment extended beyond the initial resolution—I consistently followed up with customers to ensure their concerns were fully addressed. As a result, I received high marks on all customer satisfaction surveys.

Server Engineer

Sep 2014 - Sep 2015

BB&T | Winston-Salem, NC

- Weekly Air Travel Across BB&T's US Footprint: Regularly traveled across BB&T's geographical footprint throughout the United States. This involved visiting various locations to fulfill business needs and engage with stakeholders.
- Hardware Installation and Coordination: Managed the installation, configuration, and replacement of hardware servers at bank branches. Collaborated with market leaders to streamline processes for branch employees and coordinated efforts with both offshore and local teams during the Server 2003 Upgrade Project.
- Conducted New Hire Onboarding Training: Facilitated onboarding training sessions for new hires, ensuring a smooth transition into their roles.

Associate Systems Analyst

Jan 2013 - Nov 2013

Fidelity Investments | Smithfield, RI

- Agile Collaboration and Project Facilitation: Collaborated daily with developers and analysts in an Agile environment to clarify objectives, requirements, and documentation. I facilitated meetings with developers, analysts, and senior management to define team goals for project iterations and sprints. Additionally, I conducted application demos for clients and stakeholders.
- Optimized web services for CRD Number Integration within the World Class project, leveraging SQL to collect and analyze usage data for the current version of the Mobile World Class application.
- Authored comprehensive system design specifications documentation for the Consolidation of Data Feeds Project, strategically aimed at minimizing redundancy and streamlining maintenance operations costs.
- Successfully completed the Fidelity Investments Leap Training Program, gaining valuable insights and skills to excel in financial services and technology.

Technical Intern

May 2012 - Aug 2012

Fidelity Investments | Raleigh, NC

- Provided essential requirements gathering on the User Interface (UI) design of all available accounts to customers on Fidelity.com
- Conducted in-depth analysis for the Accounts Opening team, identifying the conditions that drive the features utilized in the User Interface (UI)

Volunteer Experience

Volunteer

Jun 2013 - Present

Kramden Institute Inc.

Volunteered to help refurbish donated PCs, laptops, and peripherals and award them to economically disadvantaged students.
